A quote can miss the whole kit.

A visible price does not establish shipping, arrival or exclusions.

Latch puts required items beside attributable supplier evidence.

Unknown terms stay unknown until a person can resolve them.

Vultr plans. The sandbox executes.

Goal and public descriptions → bounded model plan

Admitted pages → Playwright in a disposable gVisor container

Captured text + screenshots → extraction and vision checks

Provisional fields → individual review and comparison

Vultr control VM + separate worker VM + Serverless Inference

Neon durable records / Caddy HTTPS / encrypted artifact volume

Containment is enforced outside the model.

Actual Vultr worker check: 2026-11-06 08:31:16 UTC

Metadata, private, loopback and direct public access: denied

Host SSH and DNS sockets: denied

Host watchdog terminated the task; cleanup confirmed

Nonroot Chromium + gVisor + seccomp + exact public proxy policy

The worker receives no model, database or deployment credentials.

The public demo keeps uncertainty visible.

Real source: Ubiquiti U6+ public product page

Demonstration requirements: USD 200, deadline seven days away

Incomplete quote terms and product image abstention block approval.

No supplier order or human buyer acceptance is claimed.

Approval is bound to evidence and time.

Immutable request versions and exact source quote attribution

Integer comparisons; feasible offers only

Recent password verification; approval expiry and revocation

Fresh all-source recheck and database commit guards

Immutable internal receipt; authorized JSON / PDF / ZIP

Try the bounded live demonstration.

Open Latch → Try a private demo → U6+ source demonstration

Read the public disclosure, then start an actual inspection.

Review source evidence and save the current comparison.
